Stun Guns Batons Are One Of The Most Strategic Self Defense Weapons

I was a gun enthusiast and active for a long time in distinct teams that supported the accountable use of firearms. I was also a normal participant of quite a few gun-related activities, specially shooting competitions.

I started making a name within the world of gun sports activities and began to be invited to talk at distinct gatherings as a professional. I lectured in particular about the want to arm law-abiding citizens knowledgeably and sensibly with defense weapons in order to reduce crime.

Even so, I got to a point exactly where I explored using non-lethal weapons for strategic self defense. My heart was in the correct place, but were guns genuinely the only way? Stun guns, for example, can foil an assault although not fatally. They administer electrical shock into the body to immobilize an assailant but only briefly.

Once I learned about stun guns, I became quite enthusiastic about [stun guns batons](#) due to the fact they actually present the benefit of distance. For ordinary people, the farther that we can remain from harm's way while defending ourselves, the better. Therefore, a good type of strategic self defense could be to set a secure distance in between the would-be victim as well as the aggressor.

Amongst the stun guns batons that I looked into was the Stun Master Telescopic Stun Baton, which provides three protecting characteristics. It emits a stunning power of 800,000 volts that can penetrate 1/2 inch thick clothing. With a typical length of thirteen inches, it may stretch up to 21.5 inches long.

One excellent benefit of the Stun Master Telescopic Stun Baton is always that the entirety of its extended body is electrically charged. This helps make it difficult for the attacker to grab it from the user. Additionally, it is outfitted with a built-in flashlight along with a 120 dB alarm. A free holster came with my purchase of this rechargeable weapon.

The subsequent stun guns batons that I investigated were two models of Stun Master Stun Batons. One wields a stunning strength of 500,000 volts and is 20 inches in length. The other features a length of 16 inches and releases 300,000 volts of electric shock. Each are outfitted with a wrist strap to support prevent an aggressor from snatching it away and a rubberized handle for simple carriage. Their required power supply are 9 volt batteries.

I discovered the mere sight and sound of stun guns batons will usually be threatening enough to make wrongdoers back off, and no blood will need to be shed. As additional safety, should the target hold onto you whilst being shocked, the electrical present won't move onto you.

Darral D Haecker has been training individuals how to use [self defense products](#) to defend themselves for years. There are several options, including stun guns, pepper sprays and personal alarms. He provides full service and assistance on how to use the devices.
